

Project name: Top Picks for Your Clicks

Project description: This project is intended to develop a software to customize mouse settings for different types of users with an easy-going interface and a simple design.

List of supported tasks :

- Change cursor size
- Change cursor color
- Change cursor thickness
- Change cursor speed
- Change double-click speed
- Customize keys
- Change Primary Key

- Primary Button
- Customize Keys
- Customize Speed

Customize your keys

- ☒ Use hot keys
- 1 Take a screenshot
 - 2 Open default browser
 - 3 Open task manager
 - 4 Open cortana

***Note: This prototype was made with adobe XD**

After conducting user testing with the client :

1. The client noticed that there were no buttons at all in this design so I suggest adding “apply button” and “restore changes” button at the bottom of each screen layout
2. The client noticed that there was no minimize/maximize icons on the address bar so I suggest adding both of these icons
3. The client also noticed that there is no explanation of how the color schemes work so I honestly suggest the client clicks each scheme and sees what he gets, I think this is the best way to explain “color”

4. The client thought the application needed more features of course and I agree with him, there are a lot of features that could be added to make the application more worthy
5. The client really liked the color palette used in the application
